CHAPTER ONE: PROJECT PLANNING AND ANALYSIS

1.1 Statement of the problem

In This modern era, many individuals seek spiritual guidance and religious consultation through online platform like social media. However, most of the existing platforms do not guarantee credibility, verification or privacy .Users are often exposed to misinformation ,unverified leaders and potential exploitation, which undermines trust in online religious services .there are no structured system that allows individuals to easily identify verified faith leaders, book consultation securely and document the services offered . This lack of a centralized, reliable digital platform creates a gap between individuals seeking genuine spiritual guidance and trustworthy faith leaders. Therefore, there is a need to develop a secure and verified digital system that connects users with reliable faith leaders in an organized and ethical manner.

1.2 Study Justification

This study is justified by the growing importance of digital transformation in all sectors, including religion. It will contribute to developing solutions that promote authenticity, accessibility, and accountability in faith-based services. The system will also help faith leaders extend their services beyond physical locations while maintaining ethical boundaries. The project also aims to remove the gap between spiritual care and technology, ensuring trust in digital spaces.

1.3 System Objectives

1.3.1 General Objective

To develop a web-based digital platform that connects individuals with verified and reliable faith leaders for secure religious consultation.

1.3.2 Specific Objectives

1. To implement user registration and authentication for normal users and faith leaders.
 2. To implement a faith leader verification and approval mechanism managed by an administrator.
 3. To develop a secure consultation booking and communication feature between users and faith leaders.
 4. To implement a documentation and rating system to enhance trust and accountability.
-

5. To package the web-based platform into a mobile application to allow access on smartphones without using a web browser.

1.4 Functional Requirements

Participant	User Activities	System features
Normal users	Register and log in	User authentication module
	Browse verified faith leaders	Faith leader's database
	Book consultation	Booking and scheduling system
	Rate services and experience	Rating and feedback system
Faith leaders	Create profile	Faith leaders profile management
	Upload credentials	Verification request feature
	Accept consultations	Consultation dashboard
Administrator	Verify faith leaders	Verification and approval panel
	Manage users	User management system
	Monitoring the system	Monitoring dashboard

1.5 Breakdown of tools and resources to be used

Software Tools

- **Front-End:** HTML, CSS, JavaScript – for user interface design and interaction
- **Back-End:** PHP – for system logic and data processing
- **Database:** MySQL – for storing user, consultation, and verification data
- **Security:** Password hashing, HTTPS, role-based access control

Development Environment

- IDE: Visual Studio Code
- Local Server: XAMPP
- Version Control: Git and GitHub

Hardware Resources

- Client Devices: Computers and smartphones
 - Server: Localhost and free-tier cloud hosting
-

Human Resources

- System Developer
- Supervisor
- Test Users

1.6 Project Schedule breakdown

PROJECT MILESTONES						
Weeks	Project Planning & Analysis (System Documentation: cover page & Chapter One)	Project Design & Modeling (System Documentation Chapter Two)	Project Development & Testing (System Documentation Chapter Three)	Project Deployment (System Documentation Chapter Three)	Final Touches of System Documentation (Preliminary Pages, Chapter Four & References)	Project Presentation
7-9 Jan						
12-16 Jan						
19-23 Jan						
26-30 Jan						
2-6 Feb						
7-13 Feb						
16-20 Feb						
23-27 Feb						
2-6 Mar						
9-13 Mar						
16-20 Mar						
23-27 Mar						
3 rd Apr						

CHAPTER TWO: DESIGN AND MODELING

2.1 Introduction to modeling

This chapter presents the system design and models created to visualize the structure and behavior of the digital platform before actual implementation. Modelling helps in understanding system requirements, user interactions, and data flow, thereby reducing errors during development and ensuring the system meets the intended objectives.

2.2 User Interface models

The system is designed using a **hybrid access model**, where a general description of the platform is displayed on landing page. This approach is made to increase accessibility, trust, and user onboarding.

2.2.1 Home page design

The public home page is accessible to all visitors without requiring authentication. It provides general information about the platform, its purpose, and highlights the benefits of using verified faith leaders. Visitors can view limited profiles of verified faith leaders, read general guidance articles, and understand how the system works before deciding to register.

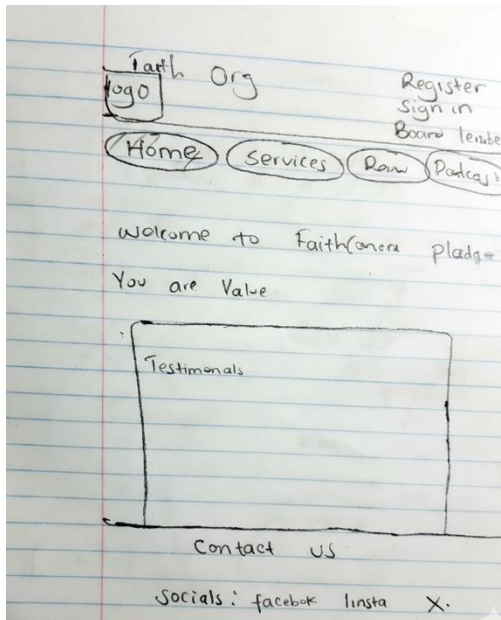

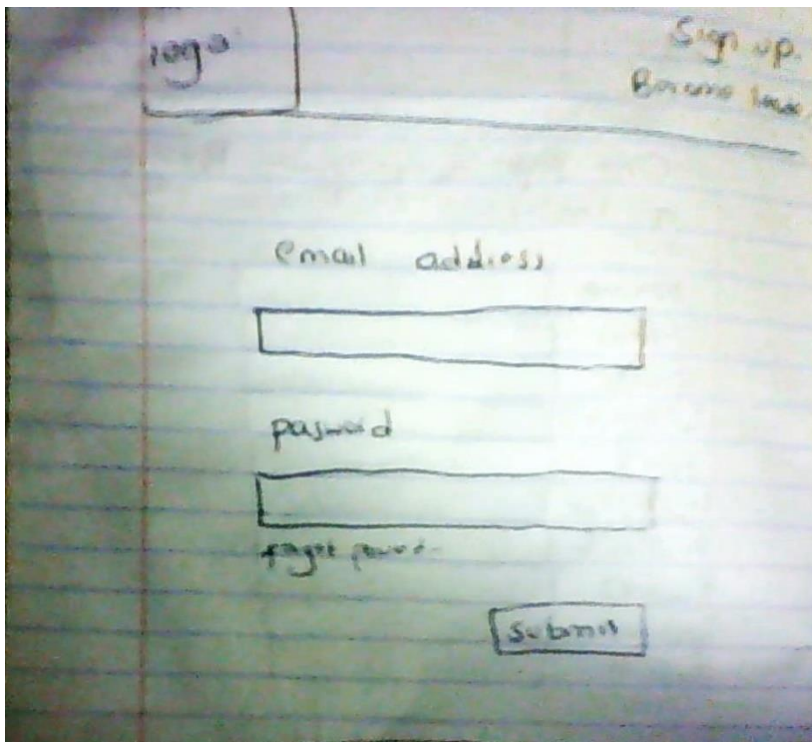

Figure 1.Home page layout

2.2.2 Log in Page design

The login page allows registered users, faith leaders, and administrators to access the system securely using their credentials. It includes input fields for email and password and validates user roles upon successful authentication.

A hand-drawn sketch of a login page on lined paper. At the top left, there is a box labeled 'logo'. To its right, there are two links: 'Sign up' and 'Forgot password'. Below these, the text 'Email address' is written above a rectangular input field. Underneath that, the text 'password' is written above another rectangular input field. Below the password field, the text 'forgot password' is written. At the bottom right, there is a rectangular button labeled 'Submit'.

Figure 2. Users log in

2.2.3 Registration form

This form captures inexperienced users into the system so that the system can remember them these users are normal clients and faith leaders the images below show both forms.
